

2D Shapes Formulae – Mensuration

Any shape that has **2-Dimensions** (length and width) is called a 2D shape.

Examples

	<i>Shapes</i>	<i>Area</i>	<i>Perimeter</i>
1.	Square 	$\text{Area} = l^2$	$P = 4L$
2.	Rectangle 	$\text{Area} = l \times w$	$P = 2l + 2b$
3.	Triangle 	$\text{Area} = \frac{1}{2} \times b \times h$	$P = \text{Sum of all three sides}$

4.	Rhombus 	Area = Base x height	P = Add all the outer sides
5.	Parallelogram 	Area = Base x height	P = Add all the outer sides
6.	Trapezium 	Area = $\frac{1}{2} \times h (P_1 + P_2)$	P = Add all the outer sides

7.	Circle 	$\text{Area} = \pi r^2$	$\text{Circumference} = 2\pi r$
